

Response from Prof. Joloba, Dean Biomedical Sciences, MAK to Mr. Mijumbi's letter.

Biobert company (not sure it is registered) with Robert as the CEO, according to the 3rd URL has claimed to have developed 4 cures based on enzymes:

- a) HIV therapy - for active HIV
- b) HIV cure - that removes HIV antibodies and patient tests negative.
- c) Cancer cure for all cancers
- d) COVID-19 cure as latest

Robert is very articulate and mixes this talent with religion hence targets a mindset of a big part of the population of uninformed that also heavily believes in quick cures.

Robert's claims are a legal, medical, scientific as well as social challenge.

Scientifically the question is whether the claims are credible (valid and reliable), There are established procedures to follow to come to this conclusion. This usually takes a very long time through lab, animal, people studies.

To ensure credibility you need to disclose the substance and allow others to test it. These procedures can be expedited in emergency situations.

Robert seems to have no clue about procedures. He does not know the stage of his discovery

In one of the videos he shows a patient that already received one of the cures. Does this follow Good manufacture practice, Good Laboratory practice, Good clinical practice?

In my opinion, Robert claims needs to be quickly investigated by the established channels: UNBS, NDA, Medical and dental council, Allied Health Professional Council, Uganda Cancer Institute. I would have suggested herbalists but he is not one.

You never know we can learn something or give him guidance or offer him medical treatment or press criminal charges

Please for now stay far away from him
